

IEEE Southeastern Michigan Section Presents a Double Header Event on "Professional Licensure & HyperScale Data Center Planning"

Professional Licensure:

What does it take to get a Professional Engineering (PE) License in the State of Michigan and why that is that important to you?

Developing a HyperScale Facility:

With the field of "Data Centers" expanding at what seems an ever-increasing rate due to this called "AI", we have been asked to present what it takes to move from an enterprise data center to what is termed as a HyperScale data center. CTC Engineering is in the midst of three such projects, specifically in the electrical power engineering aspect and this presentation is based on one of those projects that we have permission to shared.

And why is this important to the Electrical Engineering class of 2026 - 2030? Without power, these projects don't move past step 1! We will begin with the local level followed by a massive myriad of details leading up to construction documents.

Quick Summary

- **When:**
Date: October 9th, 2026
Time: 1:00 PM (EST/EDT)
- **Where:**
Online via Webex (to be shared only after you have a confirmed registration)
- **Audience:** OPEN to ALL*

*Sponsored by
IEEE
Southeastern
Michigan
UM-AA Student
Branch*

***Pre-Registration Required!**
